The overall goal of the LDP is to collaborate in taking care of all of the issues of Linux documentation, ranging from online documentation (man pages, HTML, and so on) to printed manuals covering topics such as installing, using, and running Linux. Here is the Linux Documentation Project Manifesto and Copyright License for LDP works. Translations of LDP works (languages other than English) can be found on the "Non-English Linux Info" links page. Advanced Bash-Scripting Guide This document is both a tutorial and a reference on shell scripting with Bash. It assumes no previous knowledge of scripting or programming, but progresses rapidly toward an intermediate/advanced level of instruction. . . all the while sneaking in little nuggets of UNIX® wisdom and lore. It serves as a textbook, a manual for self-study, and as a reference and source of knowledge on shell scripting techniques. The exercises and heavily-commented examples invite active reader participation, under the premise that the only way to really learn scripting is to write scripts. This book is suitable for classroom use as a general introduction to programming concepts. Linux on the Road Linux with Laptops, Notebooks, PDAs, Mobile Phones and Other Portable Devices Though there are laptop, notebook, PDA and mobile phone related HOWTOs available already, this guide contains a concise survey of documents related to mobile computer devices. Also Linux features, such as installation methods for laptops, notebooks and PDAs as well as configurations for different (network) environments are described. Although there are some caveats, Linux is a better choice for mobile computer devices than most other operating systems. Because it supports numerous installation methods, works in many heterogeneous environments and needs smaller resources. Windows+OpenSolaris+CentOS Installation Guide Explains how three different operating systems can be installed and configured on a single hard disk. The reader may choose from: Microsoft Windows NT/2K/XP + OpenSolaris 2008.11 + CentOS 5.2. Only x86 & x86-compatible architecture multi-booting is discussed and GNU GRUB is the boot loader of choice. Bash Guide for Beginners version: 1.11 author: Machtelt Garrels, last update: Dec 2008 ISBN: 0-9744339-4-2 available formats: The Bash Guide for Beginners gets you started with Bash scripting and bridges the gap between the Bash HOWTO and the Advanced Bash Scripting Guide. Everybody who wants to make life easier on themselves, power users and sysadmins alike, can benefit from reading this practical course. The guide contains lots of examples and exercises at the end of each chapter, demonstrating the theory and helping you practice. Bash is available on a wide variety of UNIX, Linux, MS Windows and other systems. Introduction to Linux - A Hands on Guide version: 1.27 author: Machtelt Garrels, last update: Jun 2008 ISBN: 1596821124 available formats: This guide was created as an overview of the Linux Operating System, geared toward new users as an exploration tour and getting started guide, with exercises at the end of each chapter. For more advanced trainees it can be a desktop reference, and a collection of the base knowledge needed to proceed with system and network administration. This book contains many real life examples derived from the author's experience as a Linux system and network administrator, trainer and consultant. We hope these examples will help you to get a better understanding of the Linux system and that you feel encouraged to try out things on your own. GNU/Linux Command-Line Tools Summary This document is an attempt to provide a summary of useful command-line tools available to a GNU/Linux based operating system, the tools listed are designed to benefit the majority of users and have being chosen at the authors discretion. This document is not a comprehensive list of every existent tool available to a GNU/Linux based system, nor does it have in-depth explanations of how things work. It is a summary which can be used to learn about and how to use many of the tools available to a GNU/Linux-based operating system. LDP Author Guide This guide describes the process of submitting and publishing a document with The Linux Documentation Project (TLDP). It includes information about the tools, toolchains and formats used by TLDP. The document's primary audience is new TLDP authors, but it also contains information for seasoned documentation authors. The Linux Kernel Module Programming Guide available versions: 2.4 and 2.6 authors: Peter Jay Salzman, Michael Burian, Ori Pomerantz last update: May 2007 (kernel version 2.6) Jul 2004 (kernel version 2.4) available formats(kernel version 2.6): available formats(kernel version 2.4): A guide to programming Linux kernel modules. The Linux System Administrators' Guide This is the third book in the main LDP series, and assumes knowledge of everything in the Installation and Users' Guides. It will cover all of the aspects of keeping the system running, handling user accounts, backups, configuration of the system, installing and upgrading software, and more. Whereas some of this information is in the Installation Guide (just to get the system off the ground) this book should be much more complete. Also visit the Linux System Administrators Guide Homepage. Pocket Linux Guide The Pocket Linux Guide is for anyone interested in learning the techniques of building a GNU/Linux system from source code. The guide is structured as a project that builds a small diskette-based GNU/Linux system called Pocket Linux. Each chapter explores a small piece of the overall system explaining how it works, why it is needed and how to build it. After completing the Pocket Linux project, readers should possess an enhanced knowledge of what makes GNU/Linux systems work as well as the confidence to explore larger, more complex source-code-only projects. Custom Linux: A Porting Guide - Porting Linux/PC to a Custom SBC This guide describes a work in progress, to port Linux to a custom PowerPC-based board. This means making the operating system work on unfamiliar hardware. Anyone, who is on the same track might benefit from reading this paper, as it highlights the pitfalls and problematic points along the way. Linux From Scratch Derived from the popular Linux-From-Scratch-HOWTO, this book describes the process of creating your own Linux system from scratch from an already installed Linux distribution, using nothing but the sources of software that are needed. The Linux Network Administrator's Guide, Second Edition version: 1.1 authors: Olaf Kirch and Terry Dawson last update: March 2000 ISBN: 1-56592-400-2 available formats: HTML (read online) HTML (tarred and gzipped package, 690k) PDF (1.5MB) This book was written to provide a single reference for network administration in a Linux environment. Beginners and experienced users alike should find the information they need to cover nearly all important administration activities required to manage a Linux network configuration. The possible range of topics to cover is nearly limitless, so of course it has been impossible to include everything there is to say on all subjects. We've tried to cover the most important and common ones. We've found that beginners to Linux networking, even those with no prior exposure to Unix-like operating systems, have found this book good enough to help them successfully get their Linux network configurations up and running and get them ready to learn more. Linux Administrator's Security Guide Removed at the request of the author (book is now more "dynamic"). Please access the Linux Administrator's Security Guide at the following location: Linux System Administration Made Easy version: 1.06 author: Steve Frampton last update: November 1999 available formats: HTML (read online) HTML (tarred and gzipped package, 99k) other : PDF, PostScript, text, and SGML source The Linux Administration Made Easy (LAME) guide attempts to describe day-to-day administration and maintenance issues commonly faced by Linux system administrators. This book can be purchased from bookstores, more information can be found here. The Linux Network Administrators' Guide This guide supplements the System Administrators' Guide and cover all of the diverse issues of networking under Linux, from UUCP to serial connections to TCP/IP. Many Linux users won't have access to such a network, so this information is in a separate manual. It contains an intro to TCP/IP and UUCP (for those who have never used such networks before, lots of background information), TCP/IP, UUCP, SLIP, and DNS configuration, configuration of mail systems such as sendmail and Smail, setting up NNTP and news, and NFS. The Linux Programmer's Guide version: 0.4 authors: B. Scott Burkett, Sven Goldt, John D. Harper, Sven van der Meer and Matt Welsh last update: March 1996 available formats: The Linux Programmer's Guide is meant to do what the name implies - It is to help Linux programmers understand the peculiarities of Linux. By its nature, this also means that it should be useful when porting programs from other operating systems to Linux. Therefore, this guide must describe the system calls and the major kernel changes which have effects on older programs like serial I/O and networking. The Linux Users' Guide version: beta-1 author: Larry Greenfield last update: December 1996 available formats: This book covers all of the user-end aspects of Linux, from sitting down at the first login session to using complex tools such as gcc, emacs, and so on. It assumes no previous Unix experience, so not only will it serve as an introduction to Linux, but to Unix in general as well. This manual won't cover system administrator tasks (i.e. anything that needs to be done as root) - it's for the J. Random User who has a working Linux system sitting in front of them. The Linux Kernel Hackers' Guide version: not available author: Michael K. Johnson last update: August 1998 available formats: HTML (read online) HTML (tarred and gzipped package, 468k) This is an older, archived instance; complete with discussion threads (no posting or replying however). Installation and Getting Started Guide version: 3.2 authors: Matt Welsh and others last update: March 1998 available formats: HTML (read online) HTML (tarred and gzipped package, 836k) This book is for personal computer users who want to install and use Linux.
